

SECUMAR introduces revolutionary new children's lifejackets

and further range improvements for 2015.

SECUMAR Mini (15–30 kg)

SECUMAR Junior (20–50 kg)

2015 sees the launch of two unique and revolutionary lifejackets for children as well as other improvements throughout the range.

SECUMAR MINI: The smallest inflatable lifejacket in the world yet offering the highest specification. Designed for children between 15 kg and 30 kg (33 – 66 lbs) it carries a 16g CO₂ cylinder to ensure it meets the full 150N classification – far in excess of any fixed foam buoyancy aid.

Developing and constructing life-saving equipment for children requires huge commitment and integrity – that's why the front opening is secured three ways, with a front zip, tie cord and click buckle, the new buoyancy bladder has small winglets on either side for more freeboard and stability in the water and also features SECUMAR's DUO-PROTECT twin-skin technology. If the outer fabric is punctured, the inner membrane will remain inflated and if both are pierced, the inner will stretch to cover the outer hole and seal it. There is a firm handle on the back to hold onto or lift with, an integral harness with a stainless D-ring and the outer cover is held closed with a 'Quickburst' zip for less bulk and faster opening. However immediately obvious is the way it looks and fits thanks to its bright red and yellow livery with a small 'pirate' logo and new ergonomic pre-formed shoulders making it extremely comfortable to wear.

SECUMAR JUNIOR: Perfect for young sailors between 20 kg and 50 kg (44 – 110 lbs), this lifejacket conforms to the full 150N classification with its 22g CO₂ cylinder and automatic inflation and also features SECUMAR's newly developed pre-formed shoulders, stabilizing 'winglets' and tried and tested DUO-PROTECT twin-skin technology for safe and comfortable kids!

SECUMAR ULTRA: Classic lifejacket made even better! The three model ULTRA range receives a complete face-lift with a new tougher outer cover in 'anthracite', orange piping and a wider orange fleece collar. It still remains an ideal 150N class lifejacket for use with lighter clothing, being about the flattest in its class so it doesn't catch on the lifelines if sitting out on the rail and in common with all SECUMAR auto-inflatable lifejackets, can be changed to manual operation in under a minute. Again, crotch strap is standard on all models.

SECUMAR ECHO: This 50N buoyancy aid aimed at rowers, paddlers and kayakers also receives a facelift with a fresher look – white piping and a red zip setting off the red and navy body. The easy-adjust belt makes it easy to wear and 'snug-up' to fit the body.

The complete SECUMAR range can be seen at:

- Hanseboot, Hamburg, 25-10-14 to 2-11-14 (Stand B5 B163)
- METS, Amsterdam, 18-11-14 to 20-11-14 (Stand O4.332)
- Nautic, Paris, 6-12-14 to 14-12-14
- Boot, Duesseldorf, 17-01-15 to 25-01 15 (Stand: Halle 11 D 42)

Bernhardt Apparatebau GmbH u. Co. has for decades stood for innovative products and with constant development and the highest quality assurance has become a world leader in the area of life saving and associated equipment.
