Efficient cleaning solution in a compact size.

 **6** SCBAs
per hour

 **12** Helmets
per hour

 **12** Air cylinders
per hour

 **48** Face masks
per hour

Technical specification

Power supply	200–240 V single-phase, 50/60 Hz, 16–20 A
Water supply	Cold & hot water, 0.5–10°dH
External Dimension (W x D x H)	Closed 680 x 790 x 1732 mm Open 680 x 1080 x 1900 mm

Easy to operate with an intuitive user interface

To make the machine as user-friendly as possible, we decided to use a single resistive touch screen display, so you have complete control of your DeconWasher Pro S. With a modern user interface, inspired by the easy-to-use analog control panel of the Solo Rescue, you can run a wash program with a single tap on the screen.

Apart from starting your wash programs, you will be able to follow its progress via a progress bar, change the wash and rinse temperatures, adjust the detergent concentration, alter the rinse volume, see the current number of completed programs since the last water change, get water change and service notifications, and more.

Efficient cleaning process in a compact size

The DeconWasher Pro S ensures excellent results without compromising function or quality despite its compact size. The smart design enables a high water flow through rotating wash arms, with nozzles designed to decontaminate and clean the gear with plenty of power. In addition, the generously-sized rinse system ensures efficient deduction of dangerous soot particles and residue.

Energy-saving ECO-mode & up to 30% less detergent consumption

An optimized decontamination process often means having your decon washer turned on and ready 24/7. While in Ready mode, the ECO-mode of the DeconWasher Pro S will consume up to 55% less energy and still be ready for use within seconds. And depending on what your washing capacity needs are, you will be able to save up to 30% or more on detergent due to the smaller wash tank.
